PRESS RELEASE

IPB 2008 – THE industry get-together for mechanical processing technologies in Asia

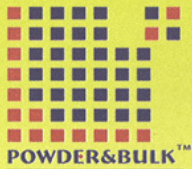

- ◆ Premiere for NürnbergMesse China as organizer
- ◆ Varied programme in store for visitors

Suppliers and production specialists from all over the world meet to discuss the latest innovations in powder, granule and bulk solids technology at the 6th International Powder/Bulk Conference & Exhibition (IPB) from 9-11 December 2008. The event takes place in the Everbright Convention & Exhibition Center in Shanghai. The exhibition with its extensive supporting and conference programme is the only trade fair in the Asian region supported by the Chinese Society of Particology (CSP).

The fascination of mechanical processing technologies lies in their spectrum of applications: These machines, plants and apparatus provide the basic framework for core processes in worldwide production lines in the food, chemical and pharmaceutical industries and in the quarrying, earthworks, ore, ceramic, cosmetic and plastic industries. With the rapid development of high-tech and new material industries in China, the demand for powder and bulk solids technologies and applications is constantly growing.

“The industry traditionally gathers again in Shanghai for the sixth edition of IPB. Chinese and international exhibitors and visitors will use the three days of the exhibition and the extensive conference programme to update on new technologies and applications,” says Axel Bartkus, Managing

Director of NürnbergMesse China. "IPB has maintained its position as the only special-interest exhibition for powder and bulk solids technology in China. In view of the continuing positive growth in the automotive, pharmaceutical, cement and other key consumer industries for powder and granules in China, there will be strong interest in the process technologies presented at IPB," continues Bartkus.

IPB is the platform for presenting products and technologies in this sector in Asia. The answers to all current challenges from raw material processing to nanotechnology are traditionally discussed here. More than 150 exhibitors present their products, including innovative solutions for processing technologies in the building material, coal and mining industries. The around 4,000 expected visitors use the platform to meet the leading manufacturers and find new applications for manufacturing processes.

New organizer profits from many years of industry expertise

The IPB exhibition with accompanying conference is an event for the Asian region that is comparable with the European-based POWTECH in Nürnberg in terms of both exhibition theme and exhibitor and visitor groups. The many years of experience and industry know-how gained from POWTECH have been incorporated in the preparation of IPB 2008 in close cooperation between NürnbergMesse GmbH and its Chinese subsidiary NürnbergMesse China Co., Ltd. and contribute to a new high-quality image: The new face of IPB 2008 is marked by targeted approaches to visitors, highlights like the top supporting and conference programme and a new marketing and Internet presence at www.ipbexpo.com.

POWTECH, the world-leading exhibition for all mechanical processing technologies and particle analysis, takes place in Nürnberg every 18 months. This is the event for presenting and discussing innovations and doing real business – with known resounding success.

The globality of this business and POWTECH's worldwide impact are shown by factors such as the constantly growing interest of international visitors. Every third visitor in 2008 came from abroad and used the exhibition for intensive information exchange.

The varied supporting programme – Targeted approach to visitors

The 6th Symposium held by the Chinese Society of Particuology concentrates on the latest advances in particle science and technology and aims to promote exchange between all sectors that use particles: mining, petrochemicals, aerosol manufacturing, colloids, food science, material science, nanotechnology, paper technology, pharmaceuticals, biological and medical technology, and soft-matter physics. The conference consists of plenary presentations, keynote lectures, discussions with invited speakers, regular oral presentations and poster sessions. The conference language is Chinese.

1st Chinese International Symposium on Particle Technology

Experts from Japan, Korea, India, the USA and China attend the highly international conference on the latest advances in nanoparticle technology, particle preparation and application, particle catalysis, fluidization and aerosol technology. The conference language is English.

1st International Symposium on Gasification and its Applications

This symposium is organized for the first time and offers seminars for experts on gasification technologies for coal, biomass, waste and their applications in various industrial fields. The conference language is English. An additional feature is the first Japanese Day, at which experts from the Association of Powder Process Industry and Engineering, JAPAN (APPIE) present various topics.

Live explosions – Explosive issues

Industrial safety and explosion protection are a hotter topic than ever before in the powder and bulk solids processing industry and process technologies sector. IPB 2008 deals with this explosive issue. The daily dust explosions in front of the exhibition centre impressively demonstrate the possible hazards.

The explosions at IPB are presented by HOERBIGER for the first time in China.

International media partner organizes tutorial

The Chinese edition of the “bulk solids handling” magazine launched by the event’s international media partner, Vogel Industrie Medien, Germany, will be presented during IPB 2008. For more than 25 years, the journal on bulk solids handling has been informing experts from all around the world to bridge the gap between academic theory, industry and practical application. Vogel Industrie Medien is also organizing the tutorial on “Pneumatic conveying and the filling and discharging of silos” on 10 December 2008. Experts at this 1-day event will exchange ideas and opinions on the principles of these technologies. Speakers: Prof. Dr. Mark Jones, University of Newcastle, Australia, and Dr. David Mills, independent pneumatic conveying expert, Great Britain.

Outlook: World Congress on Particle Technology at POWTECH 2010

The World Congress on Particle Technology (WCPT) including the PARTEC Congress takes place at the same time as POWTECH 2010 from 26-29 April 2010. This world congress will concentrate and discuss the latest results and experiences from all segments of particle technology. Over 1,500 scientists from all over the world discuss their research findings on the four days of the event. It is already confirmed that WCPT 2014 will take place in China. More information at www.wcpt6.org

Note the date: The next POWTECH takes place in Nürnberg from 27-29 April 2010. The World Congress on Particle Technology (WCPT) starts the day before and runs from 26-29 April 2010.
